

**Staff Engineer
Materials Technology Group**

Position Summary

Lead technology development programs in coatings and adhesives for a variety of applications including active coatings, functional coatings or new materials for medical applications or other newly emerging materials technologies.

Duties and Responsibilities

The candidate will provide technical direction for programs in the Coatings and Chemical Technologies team. This is a very hands on role and the candidate should be comfortable contributing to synthesis, formulating, preparation and testing of various sealants, adhesives and coatings.

He/She will seek new funding opportunities, manage customer relationships and be responsible for completing technical objectives within schedule and budget.

Responsibilities include contributing to proposal preparation and program management efforts.

Qualifications

BS,MS or PhD(preferred) in Chemical Engineering, Chemistry, Materials Science with 3 or more years of experience in contract R&D. Candidate must have experience in coatings, adhesives, and/or polymers. Excellent written and verbal communication skills required. Must be a self-starter and be comfortable working in a diverse interdisciplinary team environment. Position may require occasional travel to customer sites.

U.S. Citizenship is required
